Experiment 2: Online Hotel Room Booking Website

AIM:

To develop a responsive web portal for an Online Hotel Room Booking System that allows guests to check room availability, book rooms, manage reservations, and enables administrators to update pricing, inventory, and hotel policy information.

ALGORITHM:

- **Start** and present the hotel landing page featuring room types, amenities, and search fields.
- **Guest Registration & Login:** Allow guests to register an account, log in, and view or edit their profile.
- **Search & Availability Check:**
  - Input travel destination, check-in/check-out dates, and number of guests.
  - Display filtered room categories (e.g., Deluxe, Suite) with pricing and real-time availability.
- **Booking Process:**
  - Select a room, enter guest details, and redirect to the integrated payment gateway.
  - Generate an automated booking confirmation and email notice.
- **Manage Reservations:**
  - Display booking history on the user dashboard.
  - Verify if the current date is at least 3 days prior to the arrival date before permitting modifications or cancellations.
- **Admin Panel Operations:**
  - Adjust pricing and quantity across room categories.
  - Modify, reschedule, or cancel guest reservations as needed.

- Update static informational sections (About Us, Q&A, Travel Guide, Privacy Policy).

Stop.

OUTPUT:
