Experiment 3: Online Bus Ticket Booking System

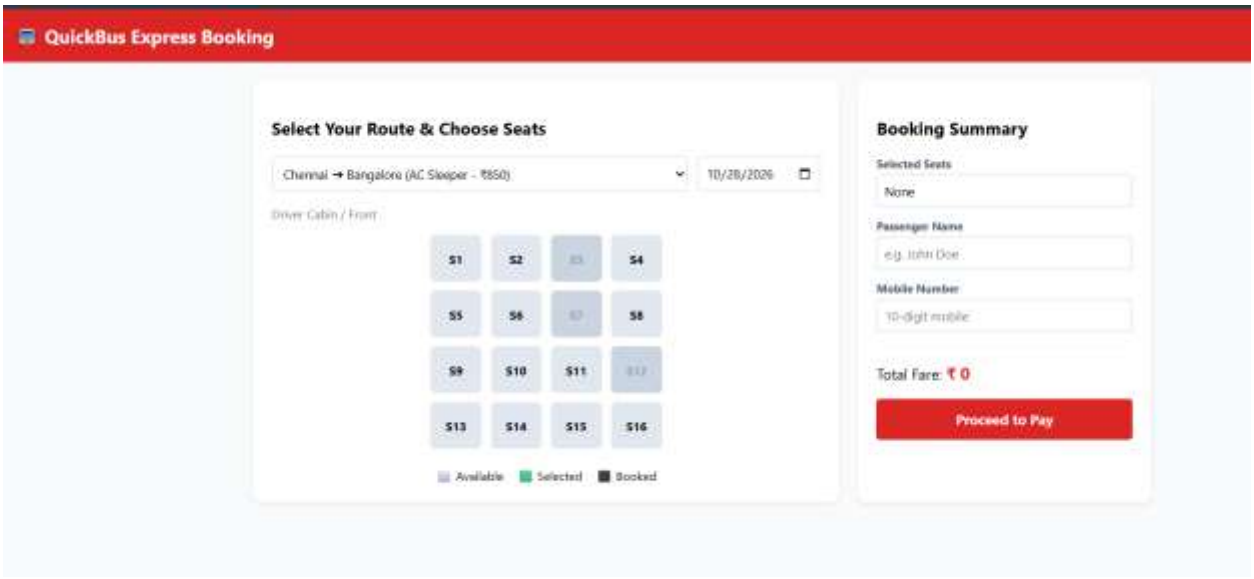

AIM:

To create an interactive web application for an Online Bus Ticket Booking System that allows passengers to search routes, select bus seats, and book tickets, while offering an administrative module to manage bus schedules and fleet information.

ALGORITHM:

- **Start** the application and render the main interface with search options and user authentication links.
- **Authentication Module:** Provide registration, login, change password, and password reset functionalities.
- **Search & Seat Selection:**
  - Accept origin, destination, journey date, and bus type (Volvo, Sleeper, Semi-Sleeper).
  - Display available bus schedules and dynamically generate the visual seat layout.
- **Ticket Booking & Payment:**
  - Allow the passenger to select vacant seats and input passenger information.
  - Process payment via the payment gateway and generate a confirmed ticket with a unique booking ID.
  - Send a booking confirmation email and store the transaction in booking history.
- **Cancellation Module:** Allow passengers to search their booking ID and cancel tickets.
- **Admin Management:**
  - Add new bus categories and update route timings, descriptions, and seat capacities.
  - Monitor user registrations, publish service updates/news, and generate operational reports.
- **Stop.**

OUTPUT:

QuickBus Express Booking
Select Your Route & Choose Seats
Chennai → Bangalore (AC Sleeper - ₹850)
